

Asset Allocation Questionnaire

Standard & Poor's Investment Advisory Services LLC ("SPIAS"), an affiliate of Standard & Poor's, created this questionnaire specifically for MetLife. The following questions will enable you to determine your time horizon and risk tolerance levels so that you can select a suggested asset allocation strategy. Please answer all of the questions and then calculate your score as indicated and select the corresponding asset allocation strategy from the provided table. Please remember these are only suggested allocations; the final decision is up to you.

NAME: _____
First Last

ADDRESS: _____
Street City & State Zip

TELEPHONE #: _____

YOUR INVESTMENT GOAL *(please select those that apply)*

What is the primary goal of this investment?

- a. Education funding
- b. Retirement funding
- c. Estate planning or inheritance for my heirs
- d. Funding for another goal (long or short time frame, e.g., down payment on a house)

YOUR TIME HORIZON

The amount of time that you can let your investments grow until you need them can impact the amount of risk you should take with the money. Please select an answer here that reflects the time you have until you need your money.

1. How many years remain before you plan to take a significant disbursement from this account?
 - a. Less than 5 years
 - b. 5 to 9 years
 - c. 10 to 20 years
 - d. Over 20 years or I plan to leave this money to my heirs
2. Which of the following statements best describes the stability of your annual income from all other sources without consideration of this investment?
 - a. It's stable and I expect it to increase more than the rate of inflation for the foreseeable future.
 - b. It's stable and I expect it to keep pace with inflation for the foreseeable future.
 - c. It's stable, but I don't expect it to keep pace with inflation.
 - d. My income can vary widely from year to year.
 - e. I need to prepare for a substantial permanent decline in my income at some point in the next five years.

3. Do you intend to withdraw any of your retirement savings to pay for non-retirement expenses?
 - a. Yes, if immediate goals become a priority I would make significant withdrawals.
 - b. Yes, but only in limited amounts and only in case of personal financial emergency.
 - c. Yes, but only once and very limited in quantity.
 - d. No, I have no intention of ever making such a withdrawal.
4. How long would your long-term savings last in the event of a personal financial emergency?
 - a. 0-3 months
 - b. 4-6 months
 - c. 7-12 months
 - d. More than 12 months
5. About how much of your monthly income do you use to pay installment debt (auto loans, credit cards, etc., but not mortgages)?
 - a. I have no installment debt.
 - b. Less than a quarter of my monthly income is used to pay installment debt.
 - c. Between a quarter and a half of my monthly income is used to pay installment debt.
 - d. More than half of my monthly income is used to pay installment debt.

YOUR INVESTMENT EXPERIENCE AND RISK TOLERANCE

Understanding your overall appetite and attitude for dealing with the various aspects of investment risk—such as loss of principal, volatility/fluctuation of values of your investments, and other factors—will have an influence on the suggested asset allocation strategy that makes sense for you. Please carefully read and answer the following questions.

6. Inflation, currently running at 2.5%–3.0% can erode the future purchasing power of the funds invested in your portfolio. What is your attitude about your portfolio and inflation? Are you:
- More concerned about the risk of short-term loss – I would be satisfied to just keep up with inflation.
 - Anticipating a return that modestly exceeds the rate of inflation and willing to accept some fluctuation in my account to achieve that return.
 - Anticipating a return that significantly exceeds the rate of inflation. I understand that short and intermediate term volatility in my account is required to achieve these goals.
7. While past performance is no guarantee of future results, for the 80 years since 1928, the S&P 500, and its predecessor index, has averaged an annual return of 10.4%. Occasionally there have been protracted periods of steep decline, such as the 48% drop in the S&P 500 Index from March 2000 to September 2002. How would you react to a substantial decline in the equity market?
- I would be comfortable and would see it as a buying opportunity.
 - I would be comfortable but would do nothing.
 - I would be uncomfortable but would do nothing.
 - I would be uncomfortable and would switch to less volatile investments.

8. Which of the following statements best describes your reaction if the value of your portfolio suddenly declined 15% as part of a similar decline in the financial markets?

This indicates a 15% decline in account value.

- I would consider it an opportunity and invest more to take advantage of lower market prices.
 - I would be somewhat concerned or disappointed but take no action on my portfolio.
 - I could not take the risk of an additional decline and would transfer a portion of the assets to investments that have less risk.
9. How would you best describe the depth and length of your experience as an investor?
- I have no experience.
 - I have some experience investing in mutual funds or individual stocks and bonds.
 - I have extensive experience investing and have a broad understanding of capital markets.

CALCULATE YOUR SCORE

The first step in selecting an asset allocation strategy is to calculate your score. Select the numerical score that corresponds to the answer you selected for each of the questions on the questionnaire and write it in the indicated box for each question. Add up your score as indicated to arrive at your total risk tolerance score.

QUESTION	A	B	C	D	E	YOUR SCORE
1	0	5	10	15	n/a	
2	10	7	5	3	0	
3	0	1	2	3	n/a	
4	0	1	2	3	n/a	
5	5	4	2	0	n/a	
6	0	5	10	n/a	n/a	
7	5	3	1	0	n/a	
8	12	7	0	n/a	n/a	
9	0	1	2	n/a	n/a	
Add the scores to get your risk tolerance score						

LOOK UP YOUR SUGGESTED STRATEGY

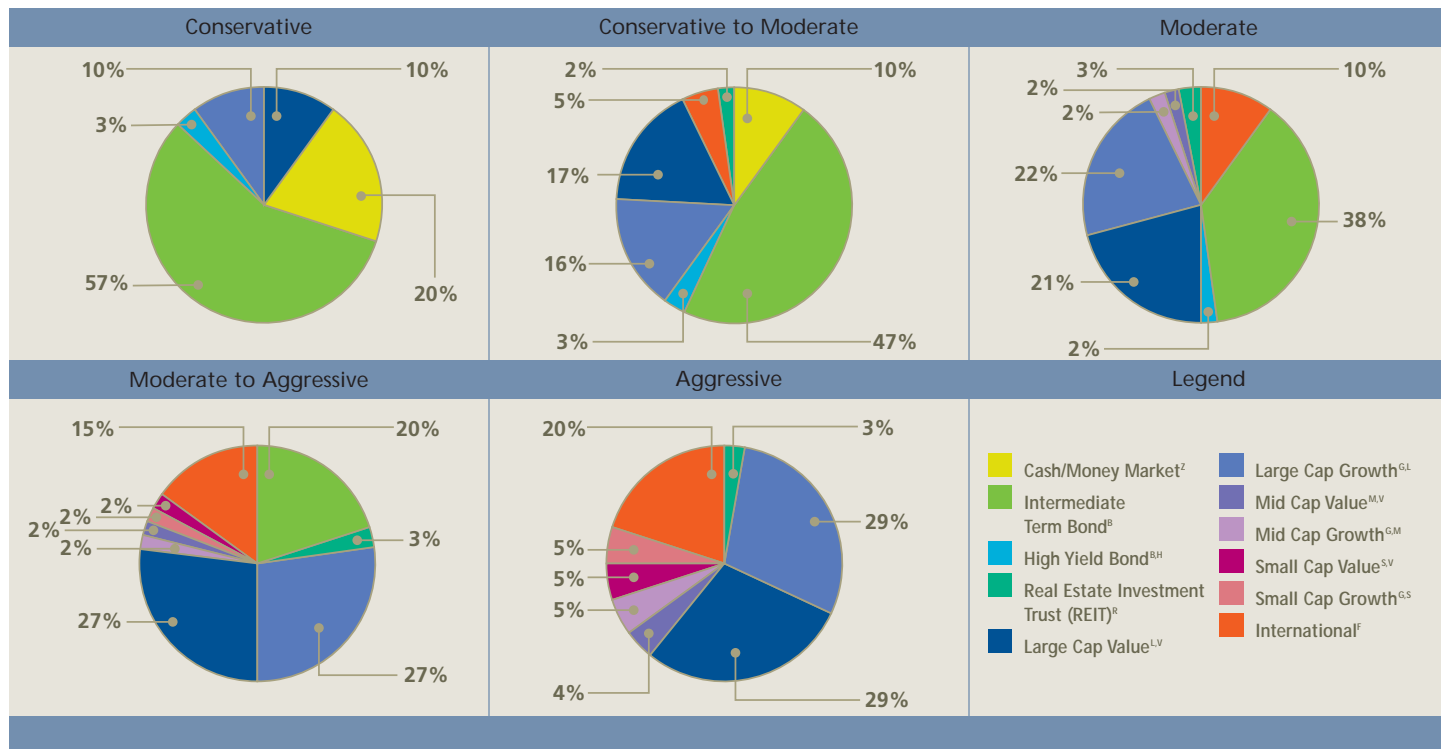

SCORE	SUGGESTED STRATEGY
0-11	Conservative
12-22	Conservative to Moderate
23-38	Moderate
39-52	Moderate to Aggressive
53-65	Aggressive

By signing below, I acknowledge that the answers on this questionnaire reflect my personal choices.

Asset Allocation Model Portfolios

- B Bond and other fixed-income securities involve both credit risk and market risk, which includes interest rate risk. Credit risk is the risk that the security's issuer will not pay the interest, dividends or principal that it has promised to pay. Market risk is the risk that the value of the security will fall because of changes in market rates of interest or other factors. Interest rate risk reflects the fact that the values of fixed-income securities tend to fall as interest rates rise. When interest rates go down, interest earned on fixed-income securities will tend to decline.
- F Foreign securities pose additional risks that are not associated with U.S. domestic issues, such as changes in currency exchange rates and different governmental regulations, economic conditions and accounting standards.
- G Invests in growth stocks, the prices of which may be more sensitive to changes in current or expected earnings than the prices of other stocks. Growth stocks may not perform as well as value stocks or the stock market in general.
- H Lower rated high yield, high risk securities generally involve more credit risk. These securities may also be subject to greater market price fluctuations than lower yielding, higher rated debt securities.
- L Invests in the common stock of large capitalization companies. These investments may not be able to attain the growth rates as high as those of successful smaller capitalization companies, especially during extended periods of economic expansion.
- M The common stocks of medium-sized companies may be more volatile than those of larger, more established companies.
- R Investing in real estate involves special risks, which may not be associated with investing in stocks, including possible declines in real estate values, adverse economic conditions, and changes in interest rates.
- S Investments in small capitalization and emerging growth companies involve greater than average risk. Such securities may have limited marketability and the issuers may have limited product lines, markets and financial resources. The value of such investments may fluctuate more widely than investments in larger, more established companies.
- V Invests in stocks that tend to trade at lower prices relative to their fundamental financial characteristics and are therefore considered undervalued. Value stocks can perform differently than other categories of stocks (e.g., growth stocks) and can continue to be undervalued by the market for long periods of time.
- Z An investment in the Portfolio is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although the Portfolio seeks to preserve the value of your investment, it is possible to lose money by investing in the Portfolio.**

SPIAS does not provide advice to MetLife's Clients and Clients' plan participants. In applying particular asset allocation models to their individual situations, qualified retirement plan participants and beneficiaries should consider their other assets, income and investments (e.g., equity in a home, IRA investments, savings accounts and interests in other qualified and non-qualified plans) in addition to their interests in the qualified retirement plan. Other investment alternatives having similar risk and return characteristics to the asset classes within the asset allocation models may be available under the qualified retirement plan in which an employee or beneficiary participates. Qualified plan participants and beneficiaries should contact their plan administrators to obtain information on other investment alternatives.

Analytic services and products provided by Standard & Poor's are the result of separate activities designed to preserve the independence and objectivity of each analytic process. Standard & Poor's has established policies and procedures to maintain the confidentiality of non-public information received during each analytic process. Standard & Poor's and its affiliates provide a wide range of services to, or relating to, many organizations, including issuers of securities, investment advisers, broker-dealers, investment banks, other financial institutions and financial intermediaries, and accordingly may receive fees or other economic benefits from those organizations, including organizations whose securities or services they may recommend, rate, include in model portfolios, evaluate or otherwise address. MetLife programs and products are not endorsed, sold or promoted by SPIAS and its affiliates, and SPIAS and its affiliates make no representation regarding the advisability of investing in the product. With respect to the Analysis recommended by SPIAS in this document, investors should realize that such information is provided only as a general guideline. SPIAS does not have any discretionary authority or control with respect to purchasing or selling securities or making other investments for investors. There is no agreement or understanding whatsoever that SPIAS will provide individualized advice to any investor. SPIAS does not take into account any information about any investor or any investor's assets when creating, providing or maintaining any model. Individual investors should ultimately rely on their own judgment in making their investment decisions. SPIAS makes no warranties, express or implied, as to results to be obtained from use of information provided by SPIAS and used in this service, and SPIAS expressly disclaims all warranties of suitability with respect thereto. While SPIAS has obtained information believed to be reliable, SPIAS shall not be liable for any claims or losses of any nature in connection with information contained in this document, including but not limited to, lost profits or punitive or consequential damages, even if it is advised of the possibility of same.

An investment based upon any of these asset allocation models should only be made after consulting with a registered representative and with an understanding of the risks associated with any investment in securities, including, but not limited to, market risk, currency risk, political and credit risks, the risk of economic recession and the risk that issuers of securities or general stock market conditions may worsen, over time. As with any investment, investment returns and principal value will fluctuate, so that when redeemed, an investor's shares may be worth more or less than their original cost. SPIAS is not responsible for client suitability for MetLife programs and products.

While diversification through an asset allocation strategy is a useful technique that can help to manage overall portfolio risk and volatility, there is no certainty or assurance that a diversified portfolio will enhance overall return or outperform one that is not diversified. An investment made according to one of these asset allocation models neither guarantees a profit nor prevents the possibility of loss.
